---

## PROFESSIONAL SUMMARY

AI undergraduate pursuing a career in Data Analytics, with a secondary interest in Data Science and Artificial Intelligence. Built strong foundations in Python, Java, SQL, and web technologies through independently designing, coding, and completing three full-scale solo projects end-to-end — from architecture and logic to interface and testing. Comfortable working independently and managing full project ownership, a mindset well suited to remote work. Actively seeking remote, part-time, entry-level opportunities to apply these skills in a real business setting and grow toward a long-term career in Data Analytics.

## TECHNICAL SKILLS

**Programming Languages:** Python, Java, SQL, JavaScript, HTML5, CSS3

**Tools:** Git, GitHub, Visual Studio Code

**Programming Concepts:** Object-Oriented Programming (OOP), File Handling, Java Swing GUI Development, Responsive Web Design, Basic Data Structures

**Database:** SQL, Relational Database Concepts

**Currently Learning:** Advanced Python, Excel for Data Analysis, SQL Projects

## PROJECTS

**AI Subscription Management System** | *Java | Swing GUI | OOP | Solo Project*

[🔗 GitHub Repo](#)

- Independently designed and built a complete desktop application simulating AI subscription management for individual and professional users, from data model to interface.
- Designed a token-based prompt tracking system that validates usage against model context limits, handling logic end-to-end without external guidance.
- Applied abstraction, inheritance, encapsulation, and polymorphism to structure a modular, maintainable codebase.
- Built separate Personal and Professional subscription plans, including team management logic, entirely on my own.
- Developed the full interactive Java Swing interface, handling both front-end usability and back-end logic single-handedly.

**Pharmacy Inventory Management System** | *Python | Modular Programming | Solo Project*

[🔗 GitHub Repo](#)

- Independently built a Python application from scratch to manage pharmacy inventory, medicine records, sales, and restocking.
- Structured the entire codebase using modular programming principles to keep it organized and easy to maintain.
- Designed and implemented inventory search, stock management, and file-based data storage for persistent records without a team or external framework.
- Wrote reusable functions throughout to simplify future updates and reduce repeated code.

**Eco-Friendly Awareness Website** | *HTML | CSS | JavaScript | Solo Project*

[🔗 GitHub Repo](#)

- Independently designed and built a responsive website promoting environmental awareness, from layout to functionality.
- Built interactive web pages using HTML, CSS, and JavaScript with a focus on usability and clean design.
- Handled interface design, navigation, and front-end functionality entirely on my own, from planning through deployment.

## EDUCATION

**BSc (Hons) Computing with Artificial Intelligence**

Expected Graduation: December 2028

*Islington College, Kathmandu, Nepal*

**Relevant Coursework:** Python Programming, Object-Oriented Programming (Java), Database Systems (SQL), Web Development, Mathematics for Computing, Artificial Intelligence Fundamentals

## CERTIFICATIONS

- [AWS Academy Graduate – Cloud Foundations](#)
- [AWS Academy Graduate – Generative AI Foundations](#)
- [AWS Academy Graduate – Machine Learning for Natural Language Processing](#)
- [AWS Academy Graduate – Machine Learning Foundations](#)

## LANGUAGES

Nepali (Native) | English (Professional Working Proficiency)
